IEE Proceedings Communications

Vol. 142, 1995

Author Index

A

Abrardo, A. p315
Adachi, F. p263
Ahmad, R. p233
Ani, C.I. p233
Appleby, S. p172
Asgari, V. p333

B

Bateman, A. p297
Benaissa, M. p345
Benelli, G. p315
Bennett, D.W. p274
Bini, A. p315
Botha, I. p49

C

Callender, C.P. p165
Cattermole, K.W. p115
Chan, C.-K. p91
Chan, K.Y. p297
Chang, C.-J. p1
Chau, Y.A. p386
Chen, X.H. p186, p193, p255
Chou, L.-D. p158
Chu, T.-P. p323
Chua, K.C. p369
Chung, W.S. p151
Coffey, J.T. p121
Collins, O.M. p121
Coulton, P. p352
Cowan, C.F.N. p165
Cryan, R.A. p15

D

Dagiuklas, A. p227
Darnell, M. p201, p210, p281, p357
Donatelli, S. p75

F

Fan, P.Z. p210, p281
Farhang-Boroujeny, B. p216
Felstead, E.B. p243
Fenn, S.T.J. p345
Ferreira, H.C. p49

G

Gabidulin, E.M. p281
Garzelli, A. p315
Georganas, N.D. p61
Ghanbari, M. p227
Grayson, M. p357
Guillemin, F. p87

H

Halsall, F. p233
Hannaford, C. p352
Higgs, R.J. p129
Hill, D.A. p243
Honary, B. p201, p352
Hsuan, Y. p121
Humphreys, J.F. p129
Hwang, L.-C. p1

J

Jennings, S.M. p349

K

Kam, P.Y. p292
Kenington, P.B. p274
Koppelman, D.M. p285
Kunicki, J.S. p250
Kwong, W.C. p141

L

Laih, A.-S. p386
Lam, W.-H. p91
Larsson, P. p221
Lee, C.-C. p21
Lee, G.Y. p54
Lee, J.Y. p67
Lim, N.C. p193
Lin, Y. p135
Lochtie, D. p179
Lyaw, I.-P. p285
Lye, K.M. p369

M

Makhamreh, I.I. p61
Malmgren, G. p99
Maric, S.V. p271
Markarian, G. p201
Marsan, M.A. p75
Mazumdar, R. p87
McDonald, D. p61
Medova, E.A. p238
Mehler, M.J. p179
Menyennett, C. p49

N

Neri, F. p75

O

Oksman, J. p255

P

Phillips, A.J. p15
Pitts, J.M. p379
Purzynski, C. p31

R

Ranheim, A. p393
Rappaport, S.S. p31, p323
Rosenberg, C. p87
Rubino, U. p75

S

Saifuddin, A. p341
See, C.M.S. p165
Senior, J.M. p15
Shiva, M. p333
Solms, F. p250
Some, Y.K. p292
Steele, R. p21

T

Taylor, D. p345
Theodoridis, S. p165
Thesling, W.H. p40
Trabelsi, C. p307
Tye, B.J. p227
Tzeng, S.-J. p158

U

Un, C.K. p54, p67, p151

V

van Rooyen, P.G.W. p250

W

Wales, S.W. p106
Widjaja, I. p7
Wilkinson, R.J. p274
Wong, T.C. p369
Wu, J.-L.C. p158

X

Xiong, F. p40

Y

Yacoub, M.D. p115
Yang, G.-C. p363
Yang, G.C. p141
Yongacoglu, A. p307

Z

Zander, J. p99

AMPLIFIERS

Determining the power rating of a multichannel linear amplifier p274

CABLES AND OVERHEAD LINES

Pre-equaliser cancellation of sinusoidal phase jitter p216

CODES AND DECODING

Adaptive frequency hopping in HF communications p99
Aperiodic autocorrelation of Frank sequences p210
Autocorrelation of Golomb sequences p281
Bit-error-rate performance for asynchronous DS-CDMA over multipath fading channels p307
Channel coding for VSAT systems p333
Coding for both protection and synchronisation p352
Construction of 2^n prime-sequence codes for optical code division multiple access p141
Decoding double-error-correcting Reed-Solomon codes p345
Decoding of multilevel block modulation codes p341
Decoding the ternary (23, 12, 8) quadratic residue code p129
Erasing gains for concatenated codes p121
Extended analysis of word synchronisation using sequence correlation techniques p357
Generalised Barker-like PN sequences for quasisynchronous spread-spectrum multiple-access communication systems p91
Grobner basis view of Welch-Berlekamp algorithm for Reed-Solomon codes p349
Low-complexity trellis decoding of linear block codes p201
Low-frequency suppression of baseband coded sequences p49
Performance-bound analysis of the new DS/SSMA protocol for wireless data networks p255
Pragmatic approach to soft-decision decoding of linear block codes p40
Proposed UPC meeting both packet video and network goals p227
Some new families of optical orthogonal codes for code-division multiple-access fibre-optic networks p363

COMMUNICATION SYSTEM THEORY

Adaptive traffic-load shedding and its capacity gain in CDMA cellular systems p186
Alternative routing strategies for adjacent cells in mobile radio systems p115
Analysis of an output-buffered ATM switch with speed-up constraints under correlated and imbalanced bursty traffic p61
Analysis of banyan networks offered traffic with geometrically distributed message lengths p285
Bit-error-rate performance for asynchronous DS-CDMA over multipath fading channels p307
Cell-rate modelling for accelerated simulation of ATM at the burst level p379
Collision resolution algorithm for M-priority users p151
Construction of 2^n prime-sequence codes for optical code division multiple access p141
Construction of optimal frequency hopping sequences for minimising bit errors in selective fading channels characteristic to digital cellular systems p271
Design and performance analysis of an asynchronous banyan network switch with window policy p54
Diversity for noncoherent DPSK direct-sequence CDMA over a shadowed Rician-fading satellite channel p386
Dynamic polling orders in multiserver multiqueue systems p75
Estimating the cost of a telecommunications network using the fractal structure of the human population distribution p172
Generalised Barker-like PN sequences for quasisynchronous spread-spectrum multiple-access communication systems p91
Maximum entropy and minimum relative entropy in performance evaluation of digital communication systems p250
Multiple call hand-off problem with queued hand-offs and mixed platform types p31
Narrowband interference rejection in direct-sequence spread-spectrum system using time-frequency decomposition p393
Network flow algorithms for routing in networks with wavelength division multiplexing p238
New approach for traffic characterisation in ATM networks p87
Performance analysis of an input and output queueing packet switch with a priority packet discarding scheme p67
Performance analysis of burst admission-control protocols p7
Performance-bound analysis of the new DS/SSMA protocol for wireless data networks p255
Schemes for equalisation of communication channels with nonlinear impairments p165
Signal-to-interference calculations for modern TDMA cellular communication systems p21
Some new families of optical orthogonal codes for code-division multiple-access fibre-optic networks p363
Subspace approach to channel assignment in mobile communication networks p179
Technique for cochannel interference suppression in TDMA mobile radio systems p106
Triple-receiver-based code protocol for unslotted DS/SSMA packet-radio networks and its performance analysis p193

COMPUTATIONAL COMPLEXITY

Low-complexity trellis decoding of linear block codes p201
Network flow algorithms for routing in networks with wavelength division multiplexing p238

COMPUTER COMMUNICATIONS

Methodology for derivation of network resources to support video-related services in ATM-based private wide-area networks p233
Optimal design of a finite-buffer polling network with mixed service discipline and general service order sequence p1
Two-connected multiple-token multiple-ring network p369

DATA COMMUNICATION

Optimal design of a finite-buffer polling network with mixed service discipline and general service order sequence p1
Two-connected multiple-token multiple-ring network p369

ELECTROMAGNETIC THEORY

Adaptive frequency hopping in HF communications p99
Generalised Barker-like PN sequences for quasisynchronous spread-spectrum multiple-access communication systems p91
Narrowband interference rejection in direct-sequence spread-spectrum system using time-frequency decomposition p393
Signal-to-interference calculations for modern TDMA cellular communication systems p21
Subspace approach to channel assignment in mobile communication networks p179
Technique for cochannel interference suppression in TDMA mobile radio systems p106

ELECTRIC VARIABLES CONTROL

Signal-to-interference calculations for modern TDMA cellular communication systems p21

FEEDBACK

Adaptive frequency hopping in HF communications p99
Performance-bound analysis of the new DS/SSMA protocol for wireless data networks p255

FIBRE LASERS

Novel laser intersatellite communication system employing optically preamplified PPM receivers p15

INFORMATION THEORY

Aperiodic autocorrelation of Frank sequences p210
Extended analysis of word synchronisation using sequence correlation techniques p357

INTERFERENCE SUPPRESSION

Adaptive frequency hopping in HF communications p99
Generalised Barker-like PN sequences for quasisynchronous spread-spectrum multiple-access communication systems p91
Narrowband interference rejection in direct-sequence spread-spectrum system using time-frequency decomposition p393
Signal-to-interference calculations for modern TDMA cellular communication systems p21
Subspace approach to channel assignment in mobile communication networks p179
Technique for cochannel interference suppression in TDMA mobile radio systems p106

ISDN

New approach for traffic characterisation in ATM networks p87
Proposed UPC meeting both packet video and network goals p227

LASERS

Novel laser intersatellite communication system employing optically preamplified PPM receivers p15

MAGNETIC MATERIALS AND DEVICES

'Shift and add' property of m-sequences and its application to channel characterisation of digital magnetic recording p135

MATHEMATICAL TECHNIQUES

Construction of optimal frequency hopping sequences for minimising bit errors in selective fading channels characteristic to digital cellular systems p271
Decoding the ternary (23, 12, 8) quadratic residue code p129
Dynamic polling orders in multiserver multiqueue systems p75
Low-frequency suppression of baseband coded sequences p49
Network flow algorithms for routing in networks with wavelength division multiplexing p238
Optimal design of a finite-buffer polling network with mixed service discipline and general service order sequence p1
Subspace approach to channel assignment in mobile communication networks p179

MODULATION

Analytical and measured performance of the combined analogue locked loop universal modulator (CALLUM) p297
Bit-error probability of QPSK with noisy phase reference p292
Channel coding for VSAT systems p333
Demodulation and decoding for diversity mobile radio systems p315
Determining the power rating of a multichannel linear amplifier p274
Diversity for noncoherent DPSK direct-sequence CDMA over a shadowed Rician-fading satellite channel p386
Low-frequency suppression of baseband coded sequences p49
Maximum entropy and minimum relative entropy in performance evaluation of digital communication systems p250
Novel laser intersatellite communication system employing optically preamplified PPM receivers p15
Pre-equaliser cancellation of sinusoidal phase jitter p216
Reduced-state Viterbi differential detection using a recursively estimated phase reference for M-ary DPSK p263

Schemes for equalisation of communication channels with nonlinear impairments p165
Technique for cochannel interference suppression in TDMA mobile radio systems p106

MODULATORS AND DEMODULATORS

Analytical and measured performance of the combined analogue locked loop universal modulator (CALLUM) p297
Reduced pull-in time of phase-locked loops using a simple nonlinear phase detector p221

MULTIMEDIA

Methodology for derivation of network resources to support video-related services in ATM-based private wide-area networks p233
Proposed UPC meeting both packet video and network goals p227

NUMERICAL ANALYSIS

Decoding the ternary (23, 12, 8) quadratic residue code p129
Grobner basis view of Welch-Berlekamp algorithm for Reed-Solomon codes p349

OPTICAL IMAGE PROCESSING

Construction of 2^n prime-sequence codes for optical code division multiple access p141
Proposed UPC meeting both packet video and network goals p227

OPTICAL LINKS AND EQUIPMENT

Construction of 2^n prime-sequence codes for optical code division multiple access p141
Network flow algorithms for routing in networks with wavelength division multiplexing p238
Novel laser intersatellite communication system employing optically preamplified PPM receivers p15
Some new families of optical orthogonal codes for code-division multiple-access fibre-optic networks p363

OPTIMISATION

Low-frequency suppression of baseband coded sequences p49
Network flow algorithms for routing in networks with wavelength division multiplexing p238

PROBABILITY AND STATISTICS

Alternative routing strategies for adjacent cells in mobile radio systems p115
Bit-error probability of QPSK with noisy phase reference p292
Construction of optimal frequency hopping sequences for minimising bit errors in selective fading channels characteristic to digital cellular systems p271
Determining the power rating of a multichannel linear amplifier p274
Dynamic polling orders in multiserver multiqueue systems p75
Estimating the cost of a telecommunications network using the fractal structure of the human population distribution p172
Low-complexity trellis decoding of linear block codes p201
Maximum entropy and minimum relative entropy in performance evaluation of digital communication systems p250
Multiple call hand-off problem with queued hand-offs and mixed platform types p31
New approach for traffic characterisation in ATM networks p87
Optimal design of a finite-buffer polling network with mixed service discipline and general service order sequence p1
Pragmatic approach to soft-decision decoding of linear block codes p40
Reduced-state Viterbi differential detection using a recursively estimated phase reference for M-ary DPSK p263
Technique for cochannel interference suppression in TDMA mobile radio systems p106
Triple-receiver-based code protocol for unslotted DS/SSMA packet-radio networks and its performance analysis p193

PROGRAMMING SUPPORT

Dynamic polling orders in multiserver multiqueue systems p75

RADIO SYSTEMS

Adaptive frequency hopping in HF communications p99
Adaptive traffic-load shedding and its capacity gain in CDMA cellular systems p186
Alternative routing strategies for adjacent cells in mobile radio systems p115
Analytical and measured performance of the combined analogue locked loop universal modulator (CALLUM) p297
Bit-error-rate performance for asynchronous DS-CDMA over multipath fading channels p307
Channel coding for VSAT systems p333
Construction of optimal frequency hopping sequences for minimising bit errors in selective fading channels characteristic to digital cellular systems p271
Demodulation and decoding for diversity mobile radio systems p315
Determining the power rating of a multichannel linear amplifier p274
Diversity for noncoherent DPSK direct-sequence CDMA over a shadowed Rician-fading satellite channel p386
Generalised Barker-like PN sequences for quasisynchronous spread-spectrum multiple-access communication systems p91
Laboratory performance of spread spectrum detectors p243
Multiple call hand-off problem with queued hand-offs and mixed platform types p31
Narrowband interference rejection in direct-sequence spread-spectrum system using time-frequency decomposition p393
Overlapping coverage and channel rearrangement in microcellular communication systems p323
Performance-bound analysis of the new DS/SSMA protocol for wireless data networks p255
Reduced-state Viterbi differential detection using a recursively estimated phase reference for M-ary DPSK p263
Signal-to-interference calculations for modern TDMA cellular communication systems p21
Subspace approach to channel assignment in mobile communication networks p179
Technique for cochannel interference suppression in TDMA mobile radio systems p106
Triple-receiver-based code protocol for unslotted DS/SSMA packet-radio networks and its performance analysis p193

RADIOWAVE PROPAGATION

Adaptive frequency hopping in HF communications p99
Signal-to-interference calculations for modern TDMA cellular communication systems p21
Technique for cochannel interference suppression in TDMA mobile radio systems p106

SIGNAL DETECTION

Laboratory performance of spread spectrum detectors p243
Reduced pull-in time of phase-locked loops using a simple nonlinear phase detector p221

SIGNAL PROCESSING

Determining the power rating of a multichannel linear amplifier p274
Laboratory performance of spread spectrum detectors p243
Maximum entropy and minimum relative entropy in performance evaluation of digital communication systems p250
Narrowband interference rejection in direct-sequence spread-spectrum system using time-frequency decomposition p393
Reduced pull-in time of phase-locked loops using a simple nonlinear phase detector p221

SPEECH COMMUNICATION AND PROCESSING

Low-frequency suppression of baseband coded sequences p49

SWITCHING THEORY

Analysis of an output-buffered ATM switch with speed-up constraints under correlated and imbalanced bursty traffic p61
Analysis of banyan networks offered traffic with geometrically distributed message lengths p285
Cell-rate modelling for accelerated simulation of ATM at the burst level p379
Design and performance analysis of an asynchronous banyan network switch with window policy p54
Methodology for derivation of network resources to support video-related services in ATM-based private wide-area networks p233
Network flow algorithms for routing in networks with wavelength division multiplexing p238
New approach for traffic characterisation in ATM networks p87
Performance analysis of an input and output queueing packet switch with a priority packet discarding scheme p67
Performance analysis of burst admission-control protocols p7
Proposed UPC meeting both packet video and network goals p227
Two-level dynamic step sizes of virtual paths on bandwidth allocation in ATM networks p158

TELECOMMUNICATION

Low-frequency suppression of baseband coded sequences p49
Methodology for derivation of network resources to support video-related services in ATM-based private wide-area networks p233
Proposed UPC meeting both packet video and network goals p227
Two-level dynamic step sizes of virtual paths on bandwidth allocation in ATM networks p158
